see also History In late 1998, Autodesk released its VectorWorks software for the desktop, which was AutoCAD's first upgrade for over two years. The version 1.1 release included many usability improvements, and it was fully backward compatible with the first released version. Though AutoCAD was more than five years old, it was in the third year of development for AutoCAD 2002, which was a long and difficult development process. Instead of receiving small modifications and improvements, as was common with AutoCAD's releases, there were major new releases every year. The first change in AutoCAD for 2002 was the use of the ribbon instead of the menu. The ribbon allowed access to a complete set of commands without needing to open a submenu, although many commands were not yet supported. The start of the third decade of AutoCAD began with the release of AutoCAD 2007 on January 23, 2006. AutoCAD 2007's feature set was very similar to the next release, AutoCAD 2009. Some of the newer features in AutoCAD 2007, such as the object snap, can be found in AutoCAD 2009. AutoCAD 2007's price was \$599.95, the same price as AutoCAD 2009. With the release of AutoCAD 2010, Autodesk unveiled a new operating system for AutoCAD. The default operating system for AutoCAD was Windows XP. The new operating system was Windows Vista, which allowed AutoCAD to take advantage of the hardware acceleration capabilities in the graphics card to improve speed and performance. In addition, AutoCAD could now access resources on the network and shared folders. Finally, AutoCAD was able to read files with the Microsoft Office 2007 XML (XML) schema, which included the XML (.XML) format. AutoCAD 2013 was the first release of AutoCAD in three years that didn't require the purchase of a new computer. It was also the first release of AutoCAD to support Windows 7, so older computers could now be used. AutoCAD 2013 was also the first release to support user-defined fonts. In addition, two new features were introduced to improve the user experience. One of them was the ribbon, which was a very important addition because it allowed AutoCAD to have a uniform look. AutoCAD 2013 was released on January 14, 2013, with a price of \$1499.95. With the release of AutoCAD 2014, a1d647c40b
